DIRECTIONS FOR USE

SURFACE PREPARATION

Remove all dirt, grease and other contaminants. If some mould or fungus is present on the surface, wash it with a commercially available bleaching agent and then treat with antifungal solution. New masonry surfaces must be allowed to cure completely. It is recommended to allow 28 days as the curing time for new masonry surfaces. For filling cracks use APCO Interior/Exterior wall putty or Cement sand mixture in 1:3 proportion. Remove rust with wire brush from metal substrates.
